

# An Efficient Control-Driven Period Optimization Algorithm for Distributed Real-Time Systems

Submitted by el\_wehby on Fri, 05/25/2018 - 4:22pm

Title An Efficient Control-Driven Period Optimization Algorithm for Distributed Real-Time Systems

Publication Type Journal Article

Year of Publication 2016

Authors [P. Deng](#), [Q. Zhu](#), [A. Davare](#), [A. Mourikis](#), [X. Liu](#), [M. D. Natale](#)

Journal IEEE Transactions on Computers

Volume 65

Pagination 3552-3566

Date Published Dec

ISSN 0018-9340

Keywords [1553757](#), [approximated functions](#), [automotive industrial case study](#), [communication resources](#), [control loops](#), [control models](#), [control performance](#), [control systems](#), [control-driven period optimization algorithm](#), [distributed real-time systems](#), [Distributed Systems](#), [geometric programming](#), [GP formulations](#), [optimisation](#), [Optimization](#), [Partitioning algorithms](#), [period optimization](#), [piecewise linear function](#), [Programming](#), [real-time embedded control functions](#), [Real-time embedded control system](#), [Real-time Systems](#), [sampling periods](#), [schedulability constraints](#), [scheduling](#), [Search methods](#), [system schedulability](#)

DOI [10.1109/TC.2016.2557322](#)

Citation Key 7457616

[approximated functions](#) [automotive industrial case study](#) [communication resources](#) [control loops](#) [control models](#) [control performance](#) [control systems](#) [control-driven period optimization algorithm](#) [Distributed real-time systems](#) [distributed systems](#) [geometric programming](#) [GP formulations](#) [optimisation](#) [optimization](#) [Partitioning algorithms](#) [period optimization](#) [piecewise linear function](#) [programming](#) [real-time embedded control functions](#) [Real-time embedded control system](#) [real-time systems](#) [sampling periods](#) [schedulability constraints](#) [scheduling](#) [Search methods](#) [system schedulability](#) [1553757](#)
