

Submit a Tool or Design Studio

Submitted by [Katie Dey](#) on Mon, 06/25/2018 - 2:38pm

SUBMIT A TOOL OR DESIGN STUDIO

On behalf of the CPS Virtual Organization, (CPS-VO) we would like to invite you to publish and make accessible your active resources via the CPS-VO. Explore the tabs in the left menu to learn more about [Tool Libraries](#), [Integrated Tools](#) and [Design Studios](#).

Not sure how your resource would be classified?

- If the resource is self-contained, providing a suite of services through a fully web-accessible interface, the CPS-VO can provide authentication services to the resource hosted in our cloud or on your own servers. Embedding a resource inside the CPS-VO in this light-weight manner would be considered a **Design Studio**.
- If the resource requires external inputs to be configured, or does not have a web interface, but can still be run in a background process via SSH commands, this type of resource would be considered an **Integrated Tool**. The CPS-VO would provide parameter configuration and output storage in addition to authentication services, in our cloud or on your servers.
- If the resource is limited by licensing agreements, export restrictions, or you otherwise do not wish to make a running copy available on a shared resource for anyone in the world to access, you can still have it listed in a **Tool Library**. This makes information about the resource publicly available and searchable, with references to your own repository, website, guides, etc.

Still not sure, or think you need a mix of these? We can help! Contact us through the form below and we will get in touch with you as soon as possible.

Submitter Name: * _____

Email Address: *

Award ID:

If your tool was developed as part of a government grant, please list the grant award number.

I am interested in: *

?

Discussing my idea with a person

?

I'm ready to submit a tool for inclusion in a library

?

I'm ready to submit an integrated tool

?

I'm ready to submit a design studios

?

I'm ready to share open source models

Note that independent from the level of integration, your stated IP rights are not impacted.
