

"The Benefits and Limitations of AI in Cybersecurity"

Submitted by [grigby1](#) on Thu, 12/27/2018 - 2:10pm

A survey conducted by Osterman Research to which over 400 U.S. security analysts who work in large organizations responded, show trends and attitudes surrounding the use of AI in cybersecurity. The results of this survey indicate that AI is already a highly-used tool in the security operations of organizations. This article continues to discuss key findings of the study in regard to the adoption, advocacy, benefits, and limitations of AI in cybersecurity.
