

"Protecting Critical Internet Infrastructure from IoT Device Risks"

Submitted by [grigby1](#) on Thu, 12/27/2018 - 3:09pm

IoT devices continue to pose security risks to operational networks such as those used by federal agencies. These security risks must be prevented as such networks are important for the protection of our nation's critical infrastructure. This article continues to discuss the insecurity of IoT devices, how vulnerable IoT devices pose risks to critical infrastructure, and how to protect against these risks.
