

# "Proofpoint Warns of Custom Web Font Phishing Technique"

Submitted by [grigby1](#) on Fri, 01/04/2019 - 2:20pm

A new technique has been discovered by researchers at Proofpoint, which allows phishing web pages to go undetected. Custom web font files can be used by cybercriminals in the creation of phishing web pages to apply a substitution cypher, which can make the source code of such pages appear safe. This article continues to discuss the new method used by cybercriminals to hide phishing web pages.
