Overview:

The advancement of embedded software and systems, such as intelligent vehicles, industrial robots, wearable devices, and Internet-of-Things, has great societal and economic impacts. It is of utmost importance to ensure the safety, efficiency, and security of their design and implementation. The IEEE International Conference on Embedded Software and Systems (ICISS) is a global forum for researchers and developers from academia, industry, and government to present and discuss emerging ideas and trends in embedded software and systems. The conference has a broad scope covering the design, implementation, optimization, and validation of embedded software and systems in various domains, with recent focus on cyber-physical systems, Internet-of-Things, embedded security, and autonomous software systems.

ICISS 2019 is the 15th IEEE International Conference on Embedded Software and Systems. The conference will be collocated with the Design Automation Conference (DAC) 2019 in Las Vegas, Nevada, USA. Participants can access DAC exhibits, keynotes, and receptions. It is the next event of a series of highly successful international conferences, held in recent years as ICESS 2017 (Sydney, Australia), ICESS 2016 (Sichuan, China), ICESS 2015 (New York, USA), ICESS 2014 (Paris, France), ICESS 2013 (Sydney, Australia), ICESS 2012 (Liverpool, UK), ICESS 2011 (Changsha, China), and ICESS 2010 (Bradford, UK).
