Title	Security in Wireless Sensors Networks
Publication Type	Conference Paper
Year of Publication	2019
Authors	Johnson, Ashley, Molloy, Joseph, Yunes, Jonathan, Puthuparampil, Joseph, Elleithy, Abdelrahman
Conference Name	2019 IEEE Long Island Systems, Applications and Technology Conference (LISAT)
Date Published	may
Keywords	composability, Human Behavior, Metrics, pubcrawl, Resiliency, route discovery, Routing protocols, secure routing mechanisms, security, sensor security, telecommunication network routing, telecommunication security, Wireless sensor networks, wireless sensors networks
Abstract	Many routing mechanisms of the wireless sensor network have been suggested in the literature, but there has not been a successful one that was designed with security. In this paper, we discuss the vulnerabilities of wireless sensor networks, how attackers can exploit these vulnerabilities, and the solutions to defend against these attacks. Furthermore, we will suggest solutions and measures secure routing mechanisms in sensor networks and study how it will affect it positively.
