

CAREER: Towards Optimized Operation of Cost-Constrained Complex Cyber-Physical-Human Systems

Daphney-Stavroula Zois (PI)¹, James Boswell (Senior Personnel)²

¹Electrical and Computer Engineering Department, ²Psychology Department

University at Albany, SUNY
 {dzois, jboswell}@albany.edu

Challenges:

- Resource constraints
- Heterogeneous data fusion
- Communication/sensing errors
- Humans-in-the-loop

Solution:

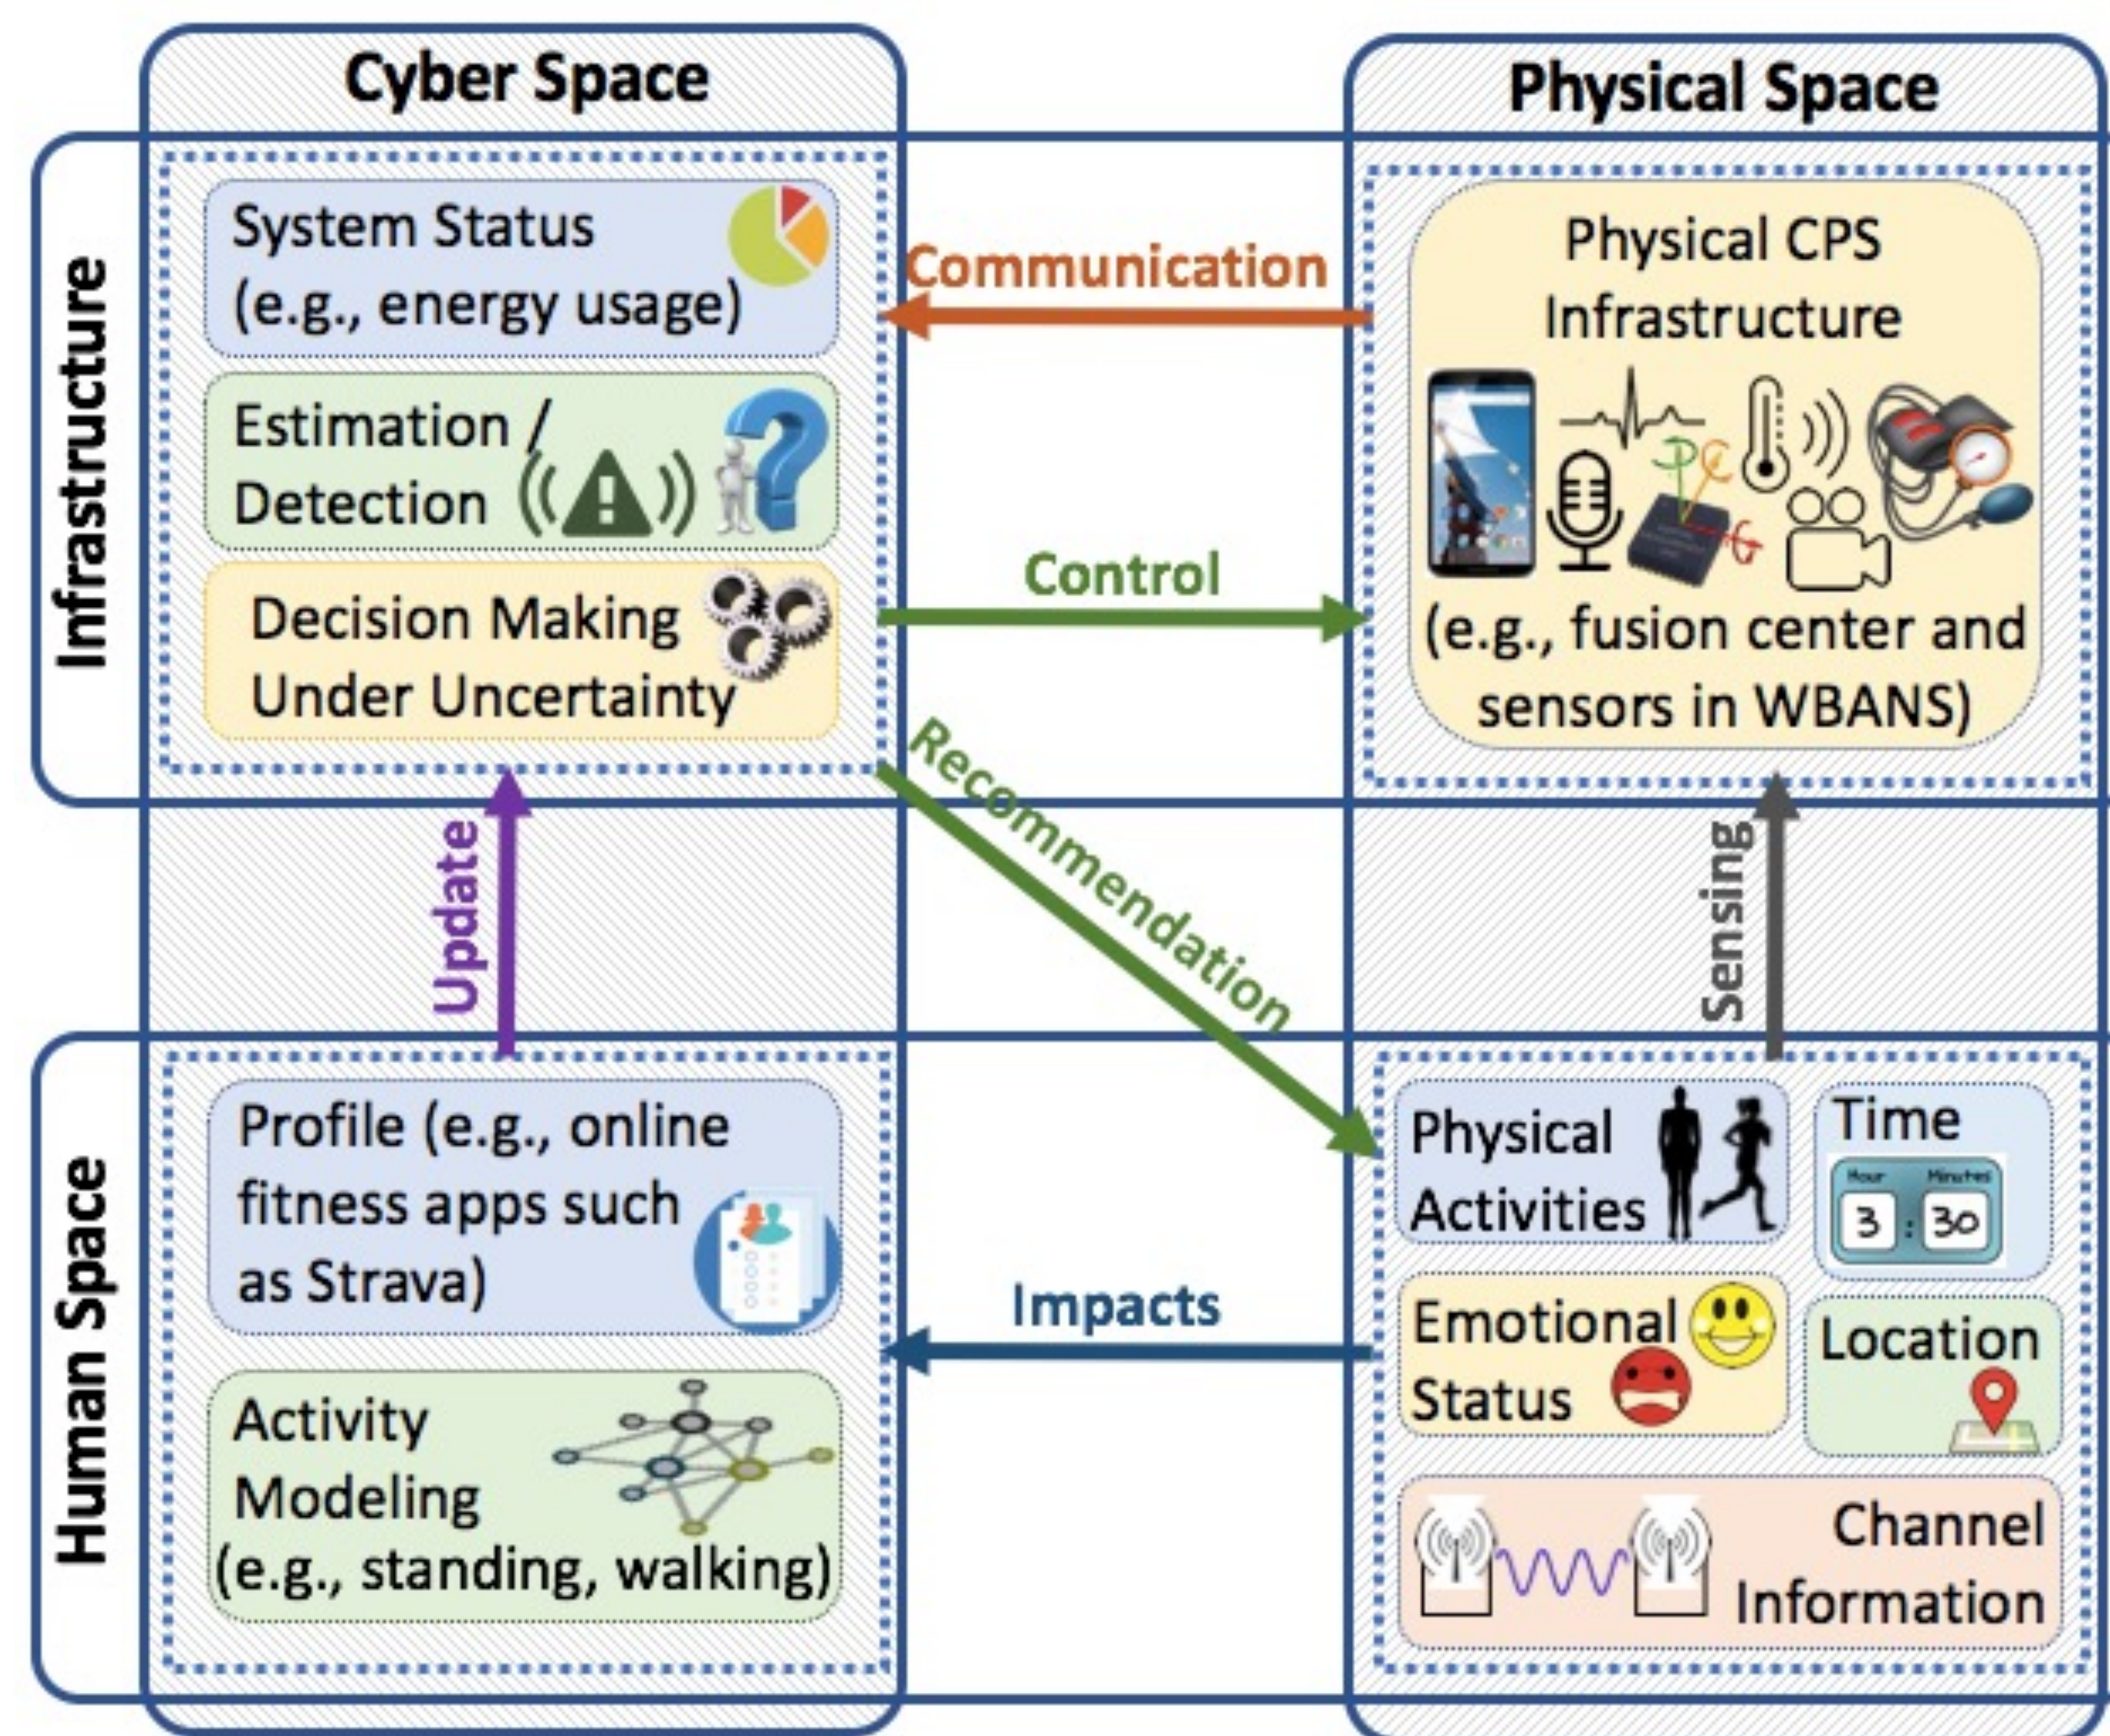

- Comprehensive system model
- Dynamic estimation and control in structured environments under single / multi-view settings

Scientific Impact:

- Realistic CPHS modeling
- Dynamic fine-grained estimation
- Fundamental limits
- Controlled sensing, communication and user interaction

Broader Impact:

- Better understanding and optimization of CPHS
- Benefit engineers, system designers, scientists, general public
- Students training and mentoring in CPHS

Cyber-physical-human Systems (CPHS) Schematic
