

SaTC: EDU: Curricula and CTF Exercises for Teaching Smart Fuzzing and Symbolic Execution

Challenges

- Shortage of motivated and skilled students in security
- Teaching advanced security techniques in an engaging manner
- Focusing students on the most meaningful security problems to tackle

Solution

- Scaffolded CTF exercises to develop confidence and competence
- Polymorphic levels to ensure each student performs work
- Extensible frameworks to allow for crowd-sourced level design
- Hosted to allow any use

[angr CTF](#)
Symbolic execution
(x86 binaries)

[Thunder CTF](#) and [GCP CTF](#)
Cloud security
(Google Cloud Platform)

[AFL codelab/CTF](#)
Smart-fuzzing
(C and x86)

[Manticore codelab/CTF](#)
Symbolic execution
(Ethereum smart contracts)

Scientific Impact

- Developing best practices for producing the highly skilled security practitioners society needs
- Enabling the crowd-sourced development of exercises to keep up with changing security landscape

Broader Impact

- Leveling up the skills for the next generation of students
- Inclusively designed CTFs to broaden participation
- Offered as workshops to the community (BSidesPDX)
- Development and testing done via high-school internship programs (Saturday Academy ASE)
