

# Geolocated Allergen Sensing Platform (GASP)

### Why asthma makes it hard to breathe

All enters the respiratory system from the nose and mouth and passes through the bronchial tubes.

In a non-asthmatic person, the muscles around the bronchial tubes are relaxed and the air passages become inflated and smooth, making it easier to breathe.

In an asthmatic person, the muscles of the bronchial tubes tighten and thicken, and the air passages become inflamed and narrow, making it difficult to breathe.

## ASTHMA

### THE BATTLE TO BREATHE

### Why we care so much?

Approximately 50 million Americans have allergic diseases, including asthma and allergic rhinitis, both of which can be exacerbated by PM2.5.

Every day in America 44,000 people have an asthma attack, and because of asthma 36,000 kids miss school, 27,000 adults miss work, 4,700 people visit the emergency room, 1,200 people are admitted to the hospital, and 9 people die.

## Why we care so much?

### Public health, environmental and social determinants of health (PHE)

#### 7 million deaths annually linked to air pollution

In new estimates released, WHO reports that in 2012 around 7 million people died - one in eight of total global deaths - as a result of air pollution exposure. This finding more than doubles previous estimates and confirms that air pollution is now the world's largest single environmental health risk. Reducing air pollution could save millions of lives.

## GEOLOCATED ALLERGEN SENSING PLATFORM (GASP)

Thanks to the NSF support we can now validate and deploy an array of Internet of Things remote airborne particle sensors within Chattanooga to be used to provide real-time streamed data on hourly particulate levels. Measuring a full size distribution from 0.7-40 microns
