

Game Theme: Rebuilding the Power Grid

Game Day: November 2, 2019

(in Lipscomb University Allen Arena)

Boosting Engineering, Science and Technology (BEST) Robotics is a national non-profit organization providing middle and high school students with a FREE STEM Education program and competition for career and workforce development. The mission is to engage, excite, and inspire students to pursue degrees and careers in engineering, science, and technology.

Through this competition students:

- experienced what businesses do to develop a new product and bring it to market
- come together as a team with creative ideas and followed the engineering design process to deliver a final product
- write an engineering project notebook to document their work
- give a marketing presentation to sell their product to a potential client
- create a team exhibit and give interviews to promote their team in the marketplace
- test the final product in a competitive game where their robots face off against each other in a spirited environment on game day
