ABSTRACT

Implicit bias has garnered considerable public attention, with a number of behaviors (e.g., police shootings) attributed to it. Here, we present the results of 4 studies and an internal meta-analysis that examine how people reason about discrimination based on whether it was attributed to the implicit or explicit attitudes of the perpetrators. Participants' perceptions of perpetrator accountability, support for punishment, level of concern about the bias, and support for various efforts to reduce it (e.g., education) were assessed. Taken together, the results suggest that perpetrators of discrimination are held less accountable and often seen as less worthy of punishment when their behavior is attributed to implicit rather than to explicit bias. Moreover, at least under some circumstances, people express less concern about, and are less likely to support efforts to combat, implicit compared with explicit bias. Implications for efforts to communicate the science of implicit bias without undermining accountability for the discrimination it engenders are discussed.

Racial Bias in Policing

By AL BAKERSFIELD OCT. 20, 2017

Seth Wenig/Associated Press

A recent study conducted at John Jay College of Criminal Justice, “Racial Bias in Police Officers’ Treatment of Citizens,” found evidence of racial bias in how police officers treat members of the public. Racial bias refers to attitudes or stereotypes that affect our understanding, decisions, and actions toward specific racial groups.

“We wanted to examine whether bias might be affecting how police officers interact with citizens based on race,” said Dr. Sam Neilson, the lead researcher on the study. Racial bias was measured through questionnaires where officers reported their stereotypes, attitudes, and perceptions of members of various racial groups. Racial bias was calculated as the extent to which officers held more negative stereotypes, attitudes, and perceptions toward racial minorities than they held toward white individuals.
